

# ANAFI USA

DESIGNED FOR THE U.S. ARMY  
MADE FOR ENTREPRISE

## DRONE USE IN MILITARY & DEFENSE

The search for small disposable and accessible drones in military and defense is on the rise around the world. The use of these small but powerful tools offer superior operational intelligence and situational awareness for forces on the ground to save lives and minimize collateral damage.

Its powerful 32x zoom and integrated FLIR Boson thermal camera make it a trusted drone for Scouting & Intelligence, Combat Support & Mobility Support missions during the day or at night - even under extreme conditions with its IP53 rating. The zoom enables military troops to conduct long distance reconnaissance at up to 5km (3.1 miles) and to detect human targets at up to 2km (1.2 miles).

For complex missions in mountainous or urban terrains, Parrot's Beyond Line-Of-Sight solution enables operators to maintain a connection above 10km (6.2 miles) with video stream, telemetry, command and control uninterrupted.

Deployable for non-stop flight missions of up to 32 minutes, and undetectable at 130m (0.08 miles), ANAFI USA is one of the most discreet and high-performance micro-drones on the market, ensuring total discretion during sensitive or close dangerous operations. Weighting 515g (1.13 lbs), its compact and foldable design make it an easy tool to integrate in a soldier's tactical equipment pack but also a quick one to hand launch or hand recover from a vehicle in motion. ANAFI USA can also be used for highly confidential missions with its secured wireless link (AES256 with MicroHard) and powerful SD card encryption.

Manufactured in the United States, ANAFI USA is trusted by the U.S. Department of Defense and selected by the DIU's Blue sUAS program as a proven and safe platform for military, government and federal agencies' use – it is also easily purchasable notably through the renown GSA Schedule of 2020.

ANAFI USA is compliant with international drone and Direct Remote Identification (DRI) regulations.

## KEY FEATURES

- Long distance reconaissance at up to 5km
- Undetectable at 130m
- Disposable, Compact & Light
- Secured & Encrypted Data
- Trusted & Used by the U.S. Department of Defense
- TOGA compliant
